Summary

Software Engineer with 5+ years of experience designing and building scalable backend services, cloud-native applications, and full-stack solutions. Experienced in Java, Spring Boot, Node.js, React.js, AWS and Kubernetes, with hands-on ownership of microservices, CI/CD governance, platform migrations and AI-powered workflow automation. Proven track record of streamlining engineering processes, improving system reliability and delivering automation solutions recognized at the GC BuildIt Hackathon 2025.

Technologies

Languages: JavaScript, Java, TypeScript

Backend: Node.js, Express.js, Spring Boot, REST APIs, Microservices

Frontend: React.js, Next.js, HTML/CSS

DevOps & Tools: Terraform, Jenkins, CI/CD, AWS, Git, Postman, Unix, Swagger, Kubernetes (K8s), Docker

Experience

Software Engineer III | Fidelity International April 2026 – Present

- Built and deployed a backend service using **Node.js** to enable a paperless toggle feature for the FAS FIL website, deployed on **AWS**.
- Integrated governance and quality gates across multiple applications using **GitHub Actions**, enforcing unit tests, SCA checks, SonarQube analysis, and Sonatype validation within CI/CD pipelines.

Software Engineer II | Fidelity International May 2024 – March 2026

- Designed and implemented an MCP-based automation solution integrated with GitHub Copilot, exposing engineering workflows as reusable tools to automate Jira operations and project documentation, reducing manual turnaround time from hours to minutes.
- Led the migration of 4 cloud-hosted applications from **PaaS to Kubernetes**, configuring containerized deployments, Helm-based orchestration and connectivity to multiple databases and messaging services while ensuring minimal production downtime.
- Built an AI-assisted document automation platform using **React.js**, reducing a **10-FTE manual process** into an automated workflow; won 1st place among 80+ teams at the GC BuildIt Hackathon.
- Designed and developed RESTful microservices using Java and Spring Boot, implementing caching strategies to optimize frequently accessed API responses; containerized services with Docker and deployed them to Kubernetes using Helm charts.

Software Engineer I | Fidelity International Oct 2022 – April 2024

and managed **AWS API Gateway** for Node.js service, enabling secure, **IAM-based access** to microservice APIs. Achieved 100% unit test coverage using **Junit** and **Mockito**, reducing production bugs by 40%.

- **Graduate Software Engineer** | Fidelity International Dec 2021 – Sep 2022
  - Automated testing processes using **Jest** increase performance by 90% and ensure the reliability of the codebase.
  - Built data visualization dashboards using Django, collaborating with stakeholders and improving accessibility and UX by 30%

Projects

Hackathon winning Saas application | Reactjs, JAVA, API Integration, AWS API Gateway, AWS Lambda

- Built a React-based AI-assisted document automation platform, integrating backend APIs to transform a manual board-paper workflow into a digital solution; secured 1st place among 80+ teams at the GC BuildIt Hackathon 2025.

Ease Expense | MongoDB, Express, Reactjs, Nodejs, API Integration

- Built a full-stack expense tracker with JWT authentication, secure APIs, optimized MongoDB queries, and a responsive React.js + Tailwind frontend.

Certifications & Achievements

- **Winner – GC BuildIt Hackathon (2025)**
- Won - Customer Value accelerator award for improving adviser and client experience.
- **On-Spot Award:** Automated trade reconciliation for 10K+ transactions/day, reducing manual effort by 90%.

Education

Deenbandhu Chhotu Ram University of Science and Technology (Sonepat) August 2017 - July 2021
B.Tech (Electronics and Communication) | 7.8 GPA
